3. Sprint Board – Active Sprint

4. Sprint Burndown Chart

5. Reflection Questions

1. Did your estimations reflect the actual effort?

Yes, the estimations were reasonable because all the selected work items were completed within the sprint. Story points helped us understand the relative effort and complexity of the work.

2. Was your backlog well-prioritized?

Yes, the backlog was prioritized based on the importance of the work and user needs. The important shopper and vendor-related items were selected for Sprint 1, while the remaining payment-related work was kept for the next sprint.

3. How did your simulated sprint align with your plan?

The simulated sprint aligned well with our plan. We selected four work items for Sprint 1 with a total of 16 story points and moved them through To Do, In Progress and Done.

4. What insights did the burndown chart give about your team's capacity?

The burndown chart showed the progress of the team by tracking the remaining story points. Since all planned work was completed, it showed that the team was able to complete the planned Sprint 1 workload.
